

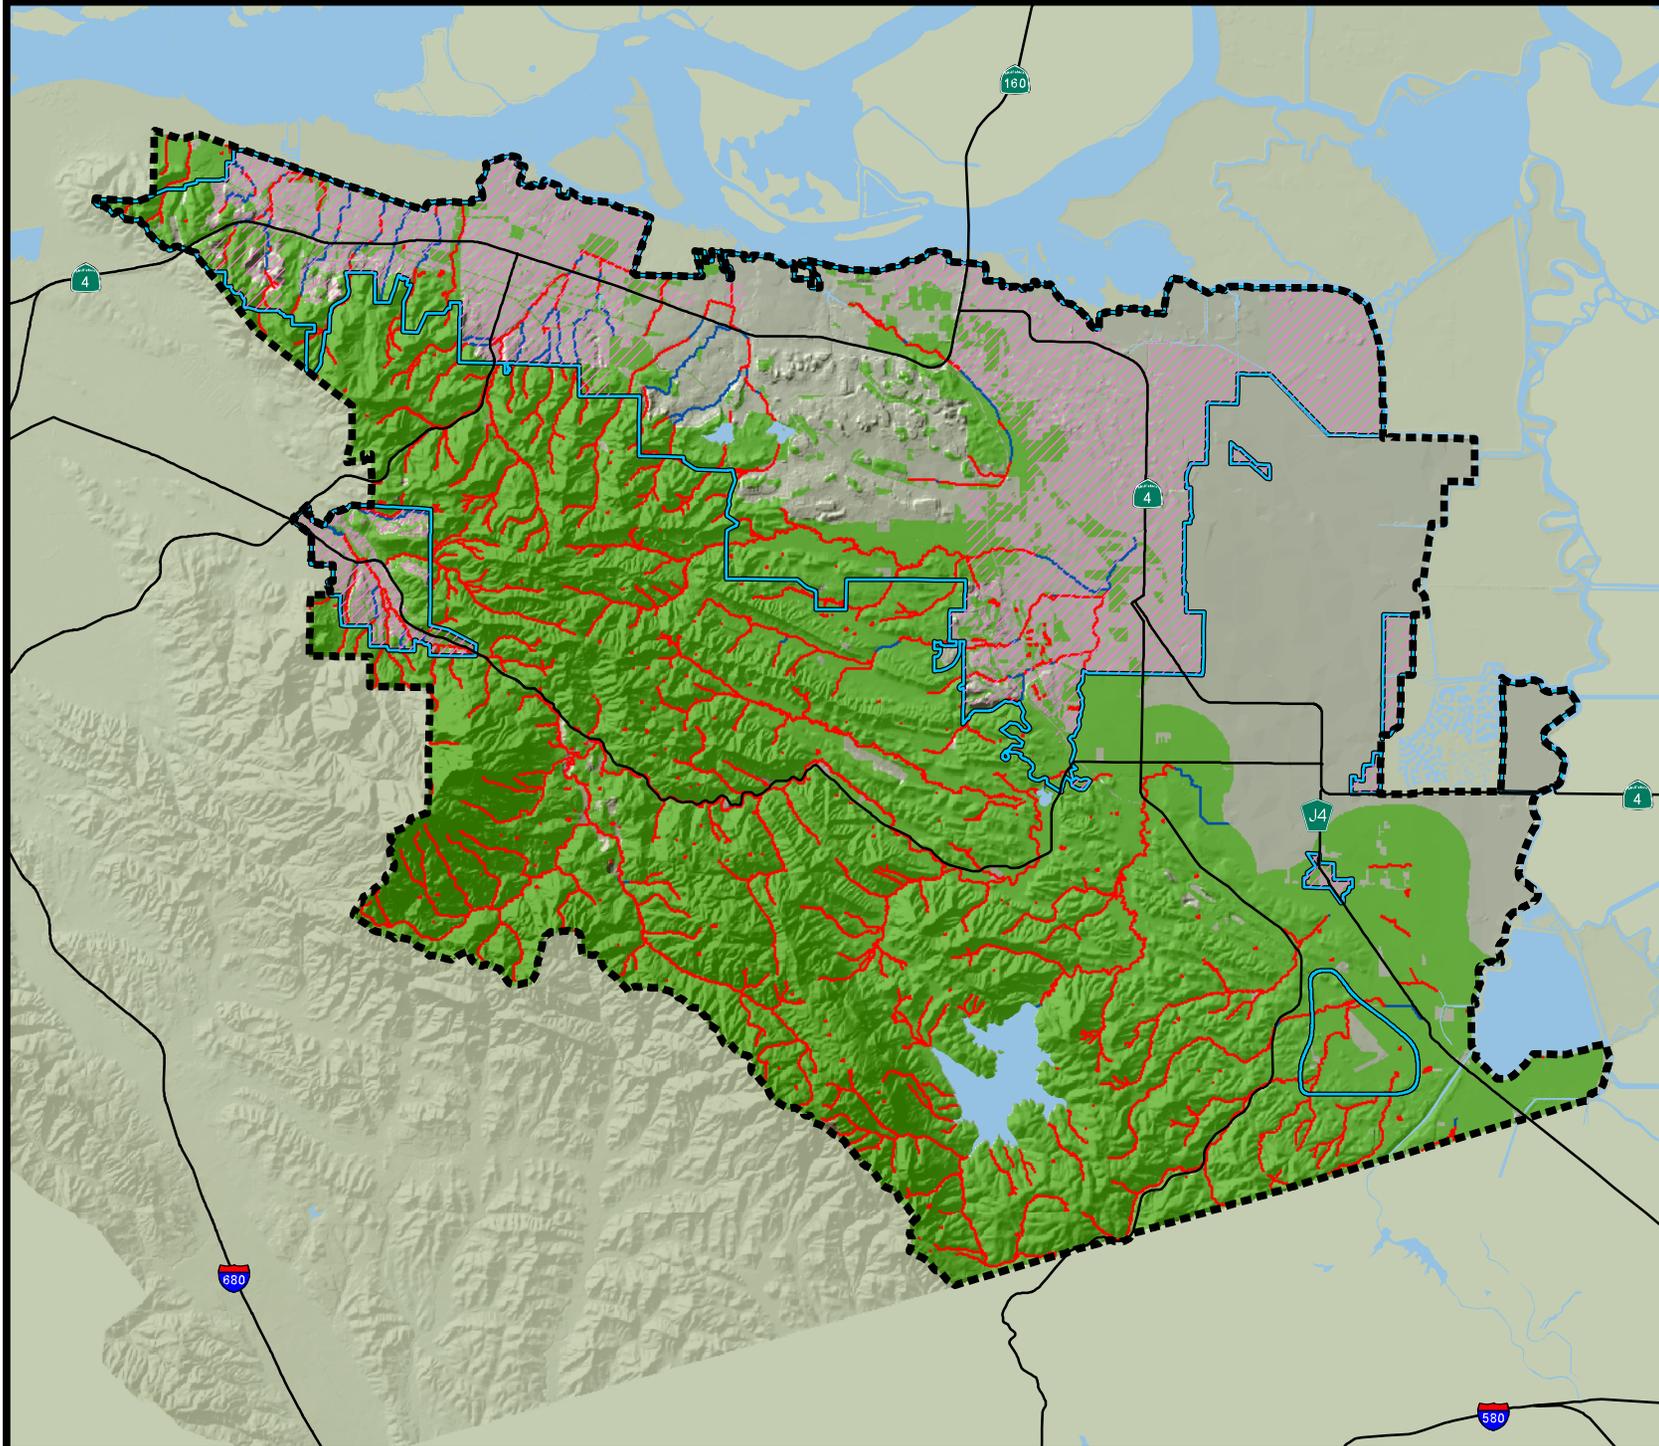

Figure 4.3 : Impact of Urban Covered Activities on Modelled Habitat Distribution for California Red-Legged Frog

DRAFT

Legend

- Inventory Area
- Urban Limit Line
- Potential Breeding Habitat
- Potential Migration and Aestivation Habitat (Streams Underground or on Agricultural Land)
- Impact of Urban Covered Activities

This map presents outcomes of a draft model that is described in the Species Profiles of the HCP/NCCP. The purpose of the model is to identify areas within the inventory area where the species occurs or could occur based on known habitat requirements. The data on which this map is based are regional in scale. This map should not be used for site planning and should be verified in the field. Occurrence data are limited by where field surveys have been conducted; some occurrence points may be geographically inaccurate.
