NOTES:
1. Cor dimensions were obtained from the 1991 edition of "Parking Dimensions," Motor Vehicle Manufacturers Association. This design and construction aid is based on the most unfavorable dimensions of cars listed. For unique or oversized cars, a special design is required.
2. For maximum grade breaks at numbered points, see chart on this plan. Wherever possible grades should be as flat as possible.
3. 20' minimum allowed if garage has sectional door(s). Otherwise, 24' minimum to garage.
5. If pavement cross slope exceeds 4%, a modified driveway profile shall be used with the slope of the driveway ramp reduced such that the difference in slope of the driveway ramp and the slope of a line between the gutter and a point on the roadway 5' from gutter line shall not exceed 10%. Reduce driveway ramp slope, not the gutter slope. Other dimensions shall be modified as approved by the Public Works Department.
6. If the Public Works Department determines that no sidewalk will ever be constructed, this 4' segment at 2% may be deleted.
7. If the grade at a point is a minimum of 0.5' above reference line, the grade at the point shall be a minimum of 0.5' above reference line. Exceptions to this requirement are subject to the approval of the Public Works Department.
