Bay-Friendly Menu of Best Practices

1 Landscape Locally

- 1. Select and evaluate the site carefully
- 2. Assess the soil and test drainage
- 3. Survey and protect flora and fauna
- 4. Consider the potential for fire
- 5. Use local, natural plant communities as models

2 Landscape for Less to the Landfill

- 1. Select appropriate plants:
 - A. Choose plants to match the microclimate and soil conditions
 - B. Choose plants that can grow to their natural size in the space allotted them
 - C. Replace sheared hedges with plants that can grow to their natural shape and size
 - D. Do not plant invasive species
- 2. Keep plant debris on- site:
 - A. Grasscycle
 - B. Produce mulch from plant debris
 - C. Compost plant debris
- 3. Prune selectively and properly
- 4. Water and fertilize judiciously
- 5. Use goats for controlling weeds and creating firebreaks
- 6. Use salvaged items and recycled content materials
- 7. Reduce and recycle waste
- 8. Separate plant debris for clean green discounts

3 Nurture the Soil

- 1. Remove and store topsoil before grading
- 2. Protect soil from compaction
- 3. Defend against erosion
- 4. Amend the soil with compost before planting
- 5. Grasscycle
- 6. Mulch regularly
- 7. Aerate compacted soils
- 8. Feed soils naturally
- 9. Avoid synthetic, quick release fertilizers
- 10. Minimize the use of chemical pesticides

4 Conserve Water

- 1. Create drought resistant soils with compost and mulch
- 2. Grow drought tolerant California native or Mediterranean plants
- 3. Minimize the lawn
- 4. Implement hydrozoning — group plants by water needs
- 5. Design for on-site rainwater collection, recycled water and/or graywater use
- 6. Design and install high efficiency irrigation systems
- 7. Install a dedicated meter to monitor landscape water use
- 8. Manage irrigation according to need
- 9. Maintain the irrigation system so every drop counts
- 10. Request an irrigation audit

5 Conserve Energy

- 1. Shade buildings to moderate temperatures
- 2. Reduce the heat island effect
- 3. Shade air conditioners
- 4. Design lighting carefully
- 5. Choose and maintain equipment for fuel conservation
- 6. Specify low embodied energy materials

6 Protect Water and Air Quality

- 1. Use Integrated Pest Management:
 - A. Prevent pest problems
 - B. Train your staff to identify and monitor pest and beneficial populations
 - C. Educate your clients
 - D. Control pest problems with physical and mechanical methods
 - E. Control pest problems with biological controls
 - F. Control pest problems with the least toxic pesticide as a last resort
- 2. Eliminate high input decorative lawns
- 3. Minimize site disturbance
- 4. Choose and maintain your materials, equipment and vehicles carefully
- 5. Keep soil and organic matter where it belongs
- 6. Minimize impervious surfaces
- 7. Plant and protect trees
- 8. Maintain and manage the irrigation system carefully
- 9. Design a system to capture and treat water

7 Create and Protect Wildlife Habitat

- 1. Diversify
- 2. Choose California natives first
- 3. Provide water and shelter
- 4. Use organic pest management
- 5. Conserve or restore natural areas and wildlife corridors
