<City, State, Zip>

PROJECT:

As part of the Contra Costa County's pavement management program, we will be applying a surface treatment to the street in front of your house and/or on adjacent streets. The County uses various types of surface treatments to protect pavements from the damaging effects of water and natural weathering.

TIMELINE:

Sometime between July 2021 and August 2021. The schedule could vary depending on weather conditions and/or equipment breakdown. You will receive a notice two working days prior to the surface treatment application and the day prior to sweeping, requesting you to park your vehicles off the street to avoid oil spray and allowing us to treat and clean the entire pavement surface.

Should any road repair be needed before surface treatment on your street, you will receive a notice before the start of work (see Details).

For information regarding this notice, please visit our website or call (925) 313-7000.

DETAILS:

Depending on the condition of the existing pavement, some pavement repair may take place prior to the surface treatment; depending on the type of surface treatment, it may take place in multiple phases. For more specific information regarding the surface treatment on your street, please go to:

[www.contracosta.ca.gov/
surfacetreatmentinfo](http://www.contracosta.ca.gov/surfacetreatmentinfo)

We realize what an inconvenience this surface treatment is to residents, but the alternative of doing nothing will result in accelerated pavement deterioration requiring very expensive pavement overlays and premature reconstruction.

PRECAUTIONS:

- Trim your trees so branches don't hang lower than 14 feet, 6 inches above the roadway to prevent damage to the trees and our equipment.
- Keep your children and pets away from the street while we are performing these treatments. Several large pieces of equipment are involved.
- Drive slowly; the pavement can be slippery because of the residual aggregate. Do not drive on the treatments until the lanes have been reopened to traffic.
- Warn your children to be careful while riding their bicycles. It would be preferable if they refrained from riding altogether until the residual aggregate is swept up.
- Continue to park your car off the road or cover it until the initial sweeping is completed. Residual aggregate thrown up by speeding vehicles could damage your car's paint.
- Check your shoes before walking into your house. The residual aggregate may be covered in oil and can be picked up and tracked onto carpets or scratch wood floors.
- Turn off sprinklers and irrigation on days work is scheduled.
